Establishment of a cross-locational biobank for cutting-edge oncology research.

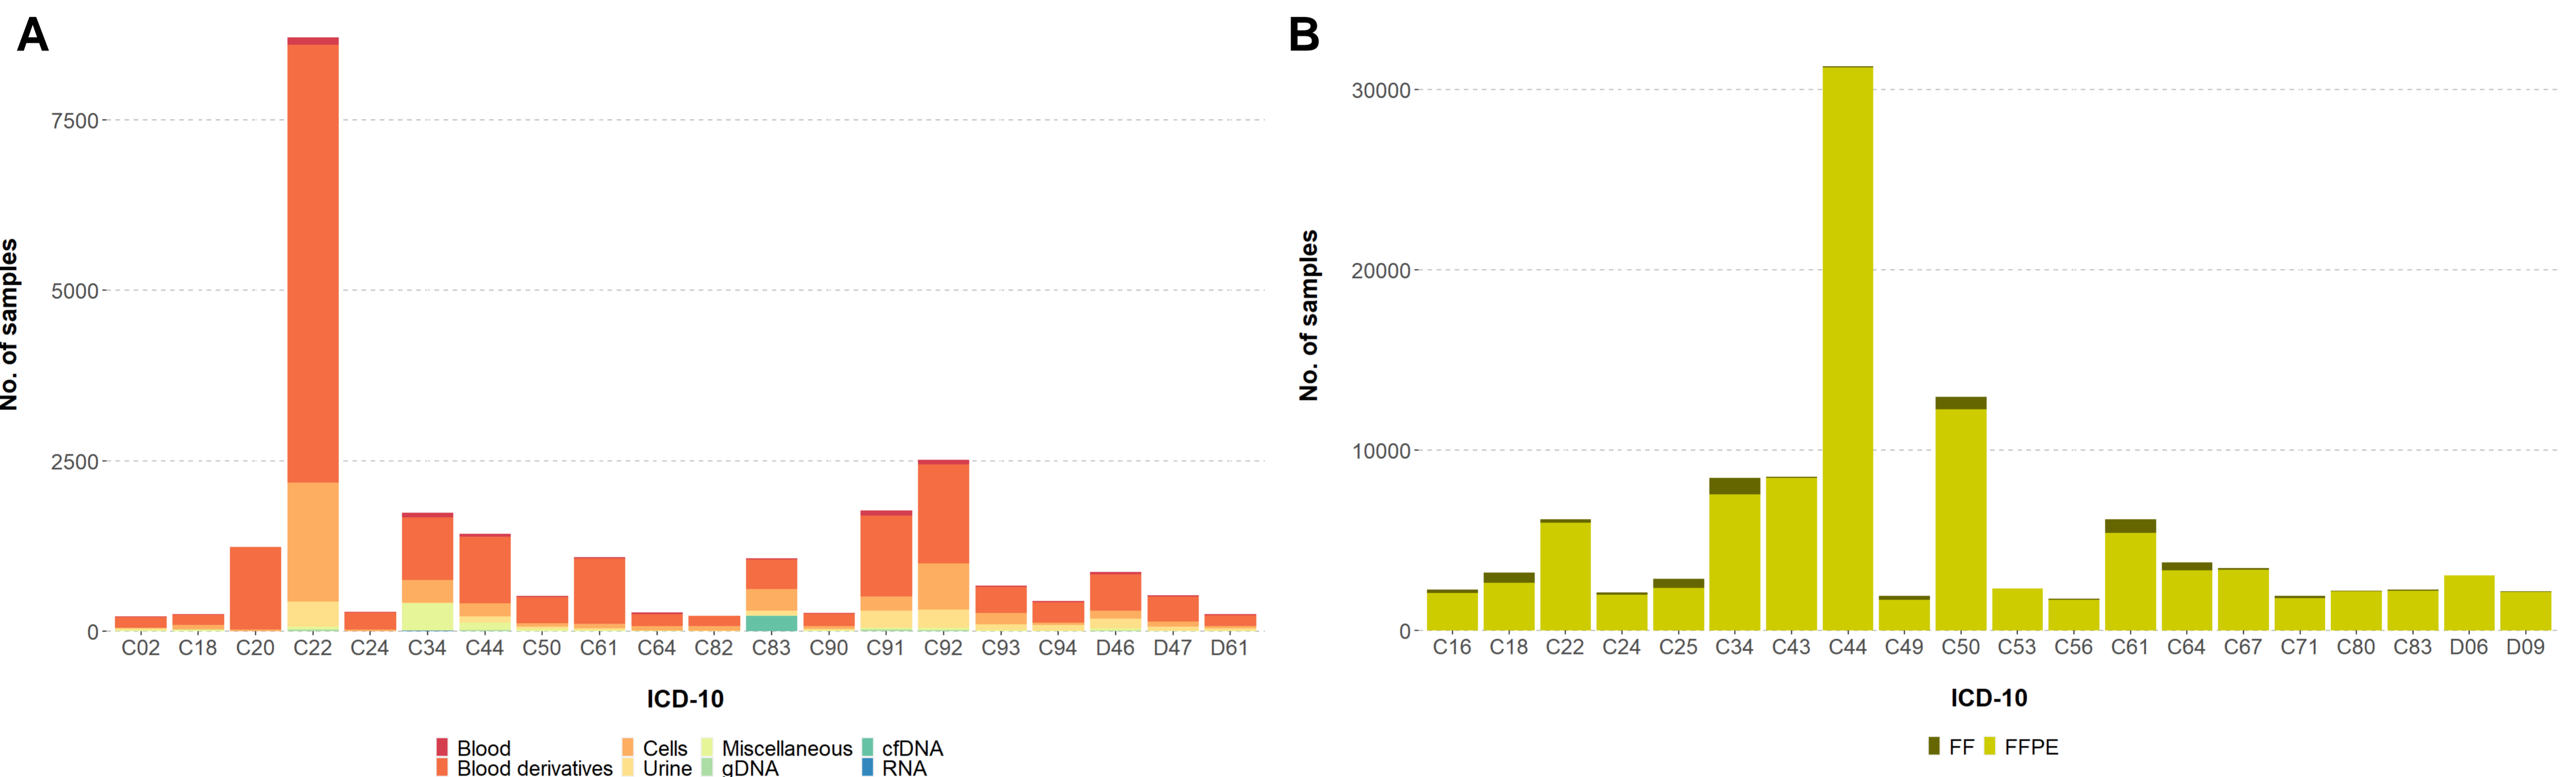

For biomedical research the sourcing of high-quality samples with structured annotated data is a prerequisite for reliable research results. The two biobanks of the medical faculties of Hannover Medical School (MHH) and the University Medical Center Göttingen (UMG) collaborate to set standards for high-quality biospecimen and to promote precision medicine in oncology.

Our offer

LSUB

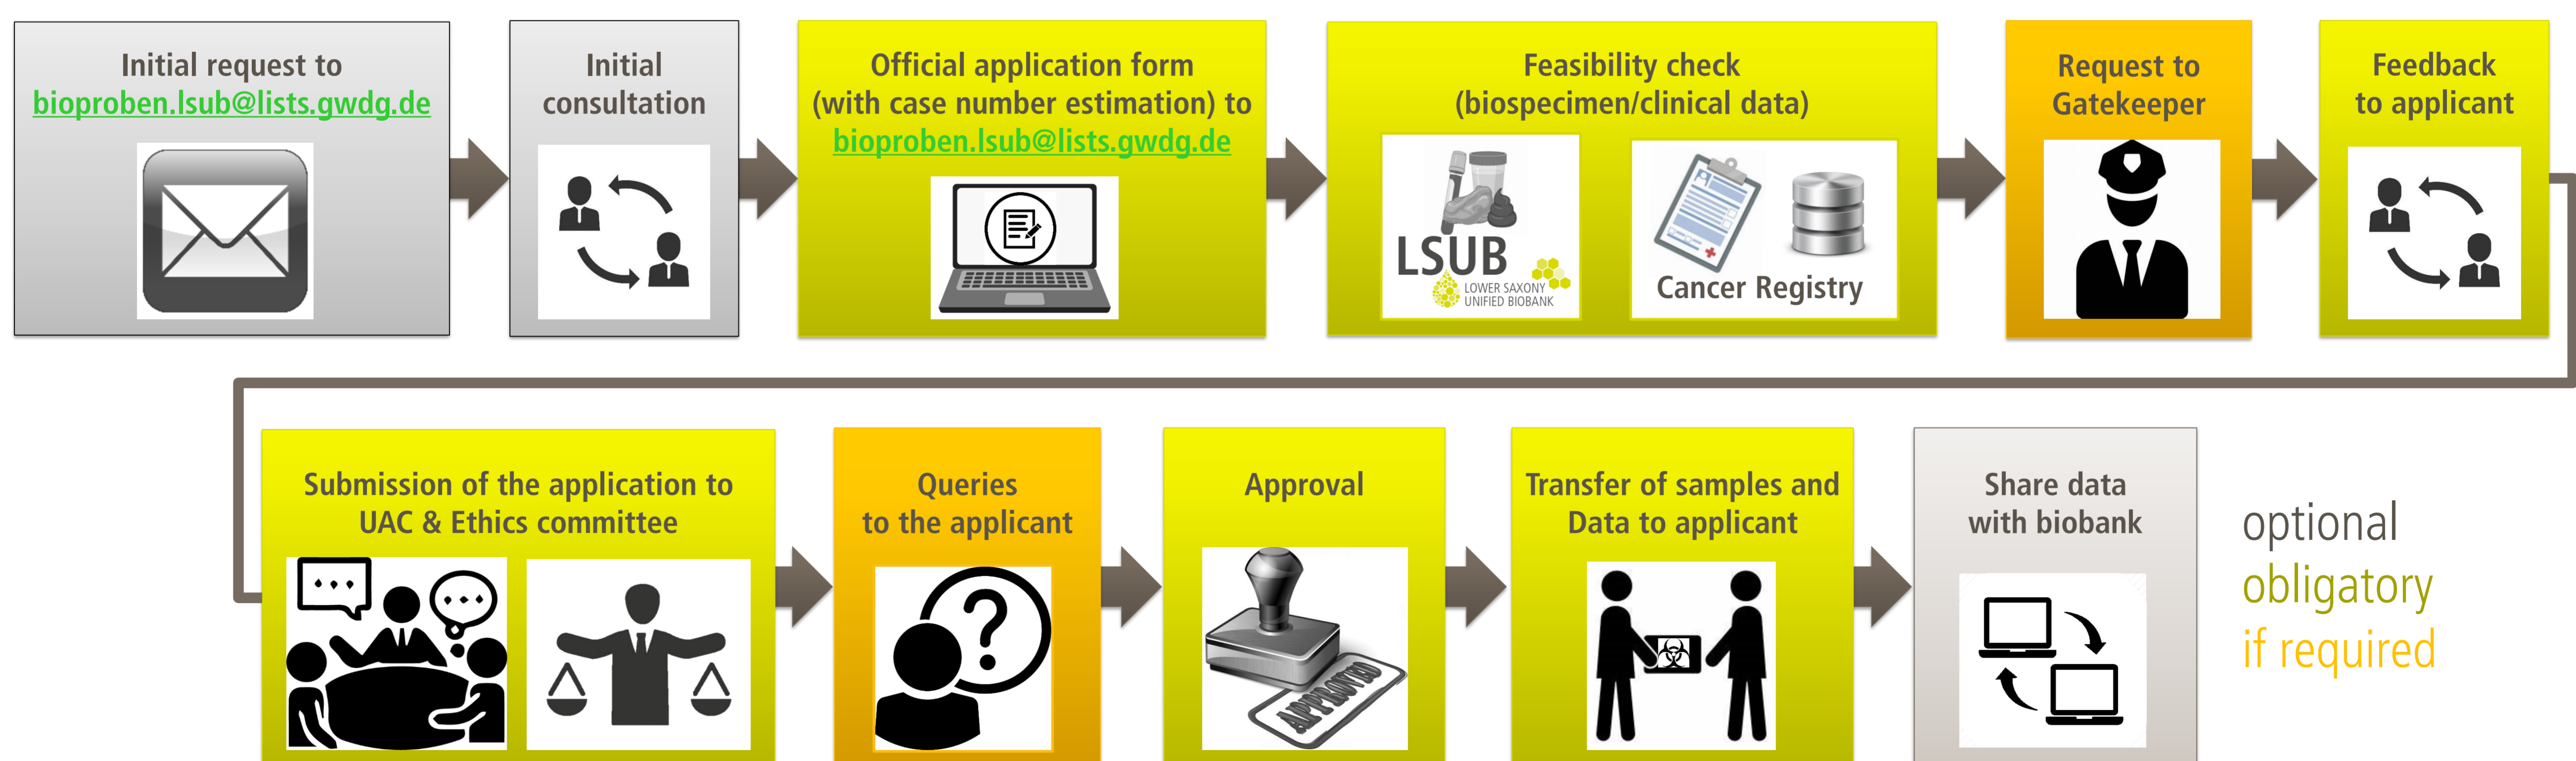

Available specimens

sorted by material type for the 20 most common oncology ICD-10 diagnoses (C00-D48) stored at LSUB

(A) Liquid samples, cells and isolated nucleic acids. Blood derivatives includes buffy coat, plasma or serum. (B) Solid tissue. Abbr.: gDNA - genomic DNA, cfDNA - cell free DNA, FF - fresh frozen, FFPE - formalin-fixed and paraffin-embedded.

What we are looking for

We want to continuously improve our biobank services and make our biobank services more responsive to researchers' needs. You can help us to do this by participating in our biobank requirements survey. Thank you!
